

Soybeans - \$129/acre added to bottom line

This north central Kansas grower made **\$129 more per acre just by adding HyprGrow**. He did this with a 12 bushel increase in his soybeans. The only difference in his fertility was adding HyprGrow. He used 1.5 gal/acre V2 and then applied 1.5 gal/acre just before flowering. **His total HyprGrow investment was \$15/acre and his net profit increased by \$129/acre!** Would you like to trade \$15 for \$129? With HyprGrow, it is possible!
