

HYPRgERM Max

GERMINATION AND ROOT GROWTH ENHANCER

HYPRgERM Max is a seed treatment that creates a biome around the seed to increase germination rates, consistency, and overall plant health in the early stages of growth. HYPRgERM promotes more root growth, plant vigor and stress tolerance. This all leads to more photosynthesis, larger stalks for increased nutrient flow, and larger root mass for a more robust rhizosphere to secrete root exudates and uptake water, minerals, and nutrients all of which equals more yield potential and more carbon cycling.

Elevate Ag is making a positive impact in the world of agriculture. With innovative ideas and cutting-edge technology, we are revolutionizing how food is grown and helping farmers increase their yields and profits. We offer products that ensure a more vibrant, productive, and sustainable future for farmers and their communities.

HYPRgERM Max

GERMINATION AND ROOT GROWTH ENHANCER

HYPRgERM Max offers a food source and diverse biology that will increase germination rates and plant stand, as well as encourage vigorous root growth and microbial activity throughout the life of the plant.

Benefits:

- Increases seed germination as well as root strength and size
- Helps retain nutrients that enhance germination rates, time to germination, and consistency of emergence
- Can easily be mixed with other seed treatments
- Boosts seed germination and strengthens root structures
- Meant to be split applied and makes your herbicides, fertilizers, insecticides and other nutritional sprays more effective
